

## Noise impact of an international traffic corridor in alpine environment: traffic scenarios and population exposure in Mont Blanc area

<u>Filippo Berlier</u>, Giovanni Agnesod, Marco Cappio Borlino, Christian Tibone, Christian Tartin, Daniele Crea

FIMA - ITALIAN FEDERATION OF APPLIED MATHEMATICS

Third International Conference "Regional Protection and Management of Environmental Risks"

The area object of the analysis and its position in Europe: The Mont Blanc Tunnel and the town of Courmayeur

The area object of the analysis and its position in Europe: The Mont Blanc Tunnel and the town of Courmayeur

### Mont Blanc Tunnel entrance

FIMA - ITALIAN FEDERATION OF APPLIED MATHEMATICS Third International Conference "Regional Protection and Management of Environmental Risks"

## The project step by step

- 1. Noise Mapping of the area of interest
  - Noise measurements
  - Traffic flow data
  - Digital model contruction
  - Noise mapping
- 2. Estimate of the population territorial distribution
  - Evaluation of the total volume of all the residential buildings
  - Calculation of inhabited volume density for each village and street of Courmayeur
  - Evaluation of the average number of inhabitants for dwelling
  - Consideration for tourist attendance in hotel or holiday houses
- 3. Estimate of the population noise exposure
  - Evaluation of the population exposed to the different sound classes on the basis of the result of noise mapping

Third International Conference "Regional Protection and Management of Environmental Risks"

## Acoustic parameters

Sound pressure level

$$Lp = 10 \ Log \ \frac{p^2}{p_0^2} \longrightarrow$$

Logarithmic scale Measure unit dB (A)

Noise annoyance as a longtime exposure effect

----->

Longtime indicators

Continuous equivalent sound level

Leq(A) = 10 Log 
$$\left(\frac{1}{T}\int_{0}^{T}\frac{p^{2}}{p_{0}^{2}}dt\right)$$

FIMA - ITALIAN FEDERATION OF APPLIED MATHEMATICS

Third International Conference "Regional Protection and Management of Environmental Risks"

## Acoustic parameters

Exemple of sound pressure level and equivalent sound level for a traffic measurement made on a road edge

FIMA - ITALIAN FEDERATION OF APPLIED MATHEMATICS Third International Conference "Regional Protection and Management of Environmental Risks"

## Noise indicators: from italian legislation

Daytime/Diurnal - noise indicator

Evaluated from 06:00 to 22:00

Nighttime/Nocturnal - noise indicator

L night

L <sub>day</sub>

Evaluated from 22:00 to 06:00

FIMA - ITALIAN FEDERATION OF APPLIED MATHEMATICS

Third International Conference "Regional Protection and Management of Environmental Risks"

Noise indicators: from european directives

Indicators for the evaluation of the population exposure to environmental noise

$$L_{den} = 10 \cdot Log \quad \frac{1}{24} \left[ 14 \cdot 10^{\frac{L_{day}}{10}} + 2 \cdot 10^{\frac{L_{evening}}{10}} + 8 \cdot 10^{\frac{L_{night}}{10}} \right]$$

Where : Daytime level = 06-20 Eveningtime level = 20-22 Nighttime level = 22-06

## L<sub>night</sub> Evaluated from 22:00 to 6:00

# Modelling road sources

NMPB-Routes-96 (XP S 31-133) Nouvelle méthode pour la prévision du bruit

FIMA - ITALIAN FEDERATION OF APPLIED MATHEMATICS Third International Conference "Regional Protection and Management of Environmental Risks"

L<sub>eg</sub>

## How the model runs?

Calculation of the sound level in the points of a grid covering the studied area following an algorithm based on the general equation of sound wave propagation

Sound source level

Propagation

 $-L_{air} - L_{ground} - L_{bar} - L_{excess}$ 

FIMA - ITALIAN FEDERATION OF APPLIED MATHEMATICS

Third International Conference "Regional Protection and Management of Environmental Risks"
